

Flossbach von Storch SICAV - Multiple Opportunities - R

INVESTMENT STRATEGY

The fund pursues an active investment approach. The fund manager can invest in any investment classes that, in his/her opinion, appear to be attractive in the relevant capital market environment. The equity component amounts to at least 25 per cent. The basic principle for asset allocation is an idiosyncratic, independent view of the world. A thorough company analysis is performed to assess whether an individual investment is attractive. A determining factor for each investment decision is the risk/ reward ratio. The potential for yield must considerably overcompensate for any risks of loss. The portfolio structure, and thus the fund's risk/reward profile, is aligned to the five Flossbach von Storch pentagram pillars, particularly the diversification principle. The fund is deliberately not oriented to any benchmark index. The main aim is to make attractive yields on a permanent basis.

EXPLANATORY NOTES REGARDING PERFORMANCE

Gross fund performance (BVI method) takes into account all costs incurred at fund level (for example, management fees), net fund performance also takes into account the subscription fee. Further costs may be charged individually at customer level (e.g. custody fees, commissions and other charges). Example calculation (net method): An investor wishes to buy shares with capital of €1,000. Based on a maximum subscription fee of 5%, € 50 will be deducted from their investment as a one-off initial charge. In addition, custody fees may also be applied, which will further reduce the investor's return. The level of custody fees can be found in your bank's schedule of fees and services.

Please refer to the cost details presented in this document to determine the maximum subscription fee for the share class of the sub-fund.

The reference index is merely informative. It does not constitute any obligation from the fund manager to track the index or achieve the same performance.

Past performance is not a reliable indicator of future performance.

MONTHLY COMMENTARY

The positive performance recorded in 2019 continued in the first half of January in the new year. The outbreak of the Chinese coronavirus in the second half of January was the first dampener to affect the capital markets in a long time. Many international companies limited their activities in the country, creating additional uncertainty in Western markets as well. While the S&P 500 gained more than three per cent during the period, almost all of those gains were given up again by the end of the month. The Dax index, which includes many industrial companies that are dependent on China, lost more than two per cent in January. This benefited gold, which gained almost six per cent in euros. While the new ECB President Christine Lagarde is still exercising restraint, the yield on 10-year German Bunds reached a three-month low of -0.4 per cent, and the yield on 10-year US Treasuries fell to 1.5 per cent, almost reaching the all-time low set at the beginning of September. The low level of interest rates is providing important support for stock markets in general, which reacted differently to the developments in China in January. While technology shares, partly due to good quarterly results, only retreated slightly from their new highs in the middle of the month, cyclical companies, such as those in the automotive and industrial sectors, suffered the most. The Fund price benefited from the performance of technology companies Alphabet and Pinterest and the positive performance of defensive shares such as Nestlé, Novo Nordisk and Reckitt Benckiser. Economically sensitive securities such as BMW, 3M and BASF, on the other hand, had a negative effect. The cash position of 17.8 % is large enough to allow us to take advantage of price reductions. We feel the equities asset class continues to offer the best risk-return profile in the long term, and view the gold allocation of 10.5 % as insurance against the risks in the financial system.

FUND MANAGER

Dr. Bert Flossbach

Dr Bert Flossbach co-founded Flossbach von Storch in 1998, and has been a member of the board ever since. He is responsible for the areas of research and investment management.

"Active, benchmark-independent portfolio management always starts with a blank sheet of paper."

Flossbach von Storch SICAV - Multiple Opportunities - R

ASSET ALLOCATION AFTER EQUITY HEDGING OVER THE COURSE OF TIME (IN %)

Source: Depository and Flossbach von Storch, status: 31.01.20

OPPORTUNITIES

- + Flexible investment policy without benchmarking.
- + Risk is broadly diversified by investing in a range of asset classes (e.g. equities, bonds, convertible bonds and precious metals). Market potential can be exploited by investing across a wide range.
- + Investing in assets denominated in a foreign currency can have a positive impact on unit values as a result of exchange rate movements.
- + Derivatives can be used to increase potential yields.
- + Precious metals (e.g. in the form of gold) can be used to increase potential yields.

RISKS

- Market risks: The securities in which the Management Company invests the sub-fund assets present opportunities for gain but also the possibility of risk. If a sub-fund invests directly or indirectly in securities and other assets, it is subject to many general trends and tendencies on the markets, which are sometimes attributable to irrational factors, particularly on the securities markets. Losses can occur when the market value of the assets decreases against the cost price. If a unit holder disposes of units in a sub-fund at a time when the quoted price of the sub-fund assets is less than at the time of investment, then the unit holder will not recover the full value of the investment. While each sub-fund constantly strives to achieve growth, growth cannot be guaranteed. The risk exposure of the investor is, however, limited to the sum invested. There is no obligation to make additional capital contributions beyond investors' investments.
- Currency risks: If a sub-fund holds assets which are denominated in foreign currencies, it shall be subject to currency risk. In the event of a devaluation of the foreign currency against the reference currency of the subfund, the value of the assets held in foreign currencies shall fall.
- Credit risks: The fund may invest part of its assets in bonds. The issuers of these bonds could become insolvent, causing the bonds to lose some or all of their value.
- Interest change risks: Investing in securities at a fixed rate of interest is connected with the possibility that the current interest rate at the time of issuance of a security could change. If the current interest rate increases as against the interest at the time of issue, fixed rate securities will generally decrease in value. Conversely, if the current interest rate falls, fixed rate securities will increase.
- Risks relating to the use of derivatives: The fund may enter into derivative transactions for the purposes listed in the KIID and the sales prospectus. This means increased opportunities, but also increased risk of losses. The use of derivatives to hedge against losses may also reduce the profit opportunities of the fund.
- Risks of precious metals and commodities: Precious metals and commodities may be subject to greater price fluctuations. Trading prices may also fall.

Please read the Prospectus and particularly the RISK WARNINGS section and the specific annex of the subfund to understand the risks and benefits of this product.

INVESTOR PROFILE

GROWTH-ORIENTED:

The fund is appropriate for growth-oriented investors. Due to the composition of the net sub-fund assets, there is a high degree of risk but also a high degree of profit potential. The risks may consist in particular of currency risk, credit risk and price risk, as well as market interest rate risks.

INVESTMENT HORIZONT:

Long-term: over 5 years

RISK/RETURN PROFILE

Low risk ← → High risk
Potentially low revenue ← → Potentially high revenue

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The historical data used for calculating the synthetic indicator is not a reliable indication of the future risk and reward profile of the share class. The category shown is not guaranteed to remain unchanged and may shift over time. Even the lowest category does not mean a risk-free investment. This share class has been placed in the aforementioned risk class because its unit price is subject to medium to significant fluctuation, therefore the profit potential and loss exposure may be moderate to high. Because of the calculation model used, all risks may not be taken into consideration when placing the share class in a risk class. Detailed information can be found in the section entitled "Risks" of the prospectus.
